IT 107 – HUMAN-COMPUTER INTERACTION

PRELIMINARY PROJECT PROPOSAL DEFENSE RUBRIC

October 30, 2026 | Computer Laboratory 1 (Lab 1)

Team / Group:	HydroSync	Project Title:	**Project DALOY:** An Offline-Capable, Solar-Powered Multi-Point River Monitoring System with Hydrokinetic-enabled and Downstream Flood-Risk Assessment
Panelist:		Section:	BSIT -2A

Criterion	Weight	Assessment Basis	Performance Guide	Score
1. Problem Identification and User Validation	15	The problem is clearly defined, supported by actual user evidence, and shown to be significant to the intended users.	14–15: Clear, specific, well validated with strong relevant evidence. 11–13: Clear and supported by adequate evidence; minor gaps remain. 8–10: Problem is identified but evidence or validation is limited. 0–7: Problem is unclear, assumed, or not supported by user evidence.	____
2. Target Users, Needs and Context of Use	10	Primary users and stakeholders are appropriate and clearly identified. Their needs, characteristics, tasks, limitations, and context are understood.	9–10: Users and context are specific, appropriate, and well supported. 7–8: Mostly clear with minor missing details. 5–6: General user description; important needs or context are weak. 0–4: Users are inappropriate, unclear, or insufficiently understood.	____
3. Proposed Solution and Problem–Solution Fit	15	The proposed solution directly addresses the validated problem and is justified based on user needs rather than technology alone.	14–15: Strong and convincing fit between problem, users, and solution. 11–13: Appropriate solution with minor justification gaps. 8–10: Partial fit; some features do not clearly address the problem. 0–7: Weak or inappropriate solution; major mismatch with the problem.	____
4. HCI and Interaction Design Application	15	Relevant HCI principles are meaningfully applied to usability, accessibility, feedback, consistency, error prevention, learnability, and interaction design.	14–15: HCI principles are clearly applied and connected to design decisions. 11–13: Good HCI application with minor gaps. 8–10: HCI concepts are mentioned but application is limited or generic. 0–7: Little or no meaningful HCI basis is demonstrated.	____
5. Physical and Digital Interaction	10	The physical component creates meaningful user interaction and is appropriately integrated with the digital component.	9–10: Physical and digital interaction is meaningful, necessary, and well integrated. 7–8: Appropriate integration with minor interaction issues. 5–6: Physical component is present but its HCI value is weak or unclear. 0–4: Physical component is decorative, unnecessary, or poorly integrated.	____
6. Prototype Concept and User Interaction	10	The concept, sketches, mock-ups, device design, or interaction flow clearly demonstrate how the user will perform the intended tasks and receive system feedback.	9–10: Interaction is clear, logical, and convincingly demonstrated. 7–8: Mostly clear with minor missing interaction details. 5–6: Basic concept shown but interaction flow or feedback is incomplete. 0–4: Prototype concept or user interaction is unclear.	____
7. Feasibility, Scope and Practicality	10	The project has realistic scope, resources, cost, technology, environment, limitations, and completion requirements.	9–10: Highly realistic, focused, and feasible within the course period. 7–8: Generally feasible with manageable concerns. 5–6: Several feasibility, scope, or practicality	____

			concerns remain. 0–4: Major feasibility issues make the proposal unrealistic.	
8. Usability Evaluation Plan	5	The group identifies appropriate users, representative tasks, evaluation methods, and usability or user-experience measures.	5: Clear and appropriate evaluation plan. 4: Appropriate plan with minor missing details. 3: Basic plan but lacks specificity. 0–2: Evaluation plan is weak, inappropriate, or absent.	____
9. Presentation Quality and Organization	5	Slides and oral presentation are concise, readable, organized, professional, and completed within the allotted presentation time.	5: Very clear, concise, professional, and well timed. 4: Clear and organized with minor issues. 3: Understandable but inconsistent or somewhat overcrowded. 0–2: Difficult to follow, poorly prepared, or substantially over time.	____
10. Question and Answer / Understanding of Proposal	5	Members demonstrate understanding of the problem, users, proposed design, HCI basis, feasibility, limitations, and evaluation plan.	5: Answers are accurate, consistent, and demonstrate strong understanding. 4: Most questions are answered clearly; minor uncertainty. 3: Partial understanding; several answers need clarification. 0–2: Major gaps, contradictions, or inability to justify the proposal.	____

TOTAL SCORE: _____ / 100

PANEL DECISION

☐ ACCEPTED ☐ ACCEPTED WITH MINOR REVISION ☐ ACCEPTED WITH MAJOR REVISION ☐ REDESIGN REQUIRED ☐ REJECTED

Major Panel Recommendations:

_____

_____

_____

_____

Panelist Signature: _____ Date: _____

Note: The numerical score reflects the quality of the proposal defense. The panel decision determines whether the proposed project may proceed. A high presentation score does not automatically override a fundamental concern regarding the validated problem, intended users, HCI interaction, feasibility, or appropriateness of the proposed solution.
